

# Developer Evaluation Task

This assignment is designed to evaluate a candidate's practical skills in backend development (Node.js), frontend development (Next.js / React), and basic full stack integration. The task will help shortlist candidates before the interview.

## Task: Take Home Assignment

Objective: Build a small catering search platform with a backend API and a frontend interface.

### ***Backend Requirements (Node.js)***

- Create REST APIs using Node.js and Express.
- Create the following endpoints: GET /api/caterers, GET /api/caterers/:id, POST /api/caterers.
- Each caterer should include: id, name, location, pricePerPlate (price per plate), cuisines (array), rating.
- Data can be stored in MongoDB or a JSON file.
- Implement basic validation for POST requests.

### ***Frontend Requirements (Next.js)***

- Create a page called /caterers.
- Fetch caterers from the backend API.
- Display caterers in card format showing name, location, price per plate, cuisines, and rating.
- Add search functionality by caterer name.
- Add a filter option for price per plate.
- Ensure the UI is clean and responsive.

## Submission Requirements

- Provide a GitHub repository containing the code.
- Include a README file explaining setup steps.
- Optional: Deploy the application (Frontend on Vercel, Backend on EC2 or Render).
- After completing the assignment, email the project (GitHub link or zip file) to: [adit.jadhav@caterersnearme.in](mailto:adit.jadhav@caterersnearme.in).
